Library

Welcome to the CSHE library, a tool in which you can find many green initiatives conducted all over the world. Please note, this tool is under construction and will be continuously updated with new initiatives. You too can contribute to this library! You will find on this page a form to fill in to share your good practices thanks to the hub and inspire in your turn the actors of sports for a greener world.

You must log in before submitting your initiative >>>

SPORT EVENT ZERO WASTE - FRANCE

Objective:
This booklet proposes actions aimed at minimizing the production of waste related in the sports events sector. It is based in particular on the approach of "R", Reduce, Reuse, Repair, and only if none of the previous options is not possible, Recycle. The list of proposed actions is of course not exhaustive. These are tracks left, intended to launch a dynamic. These tips are not all transposable to all events, but at conversely, you can imagine many complementary solutions to reduce waste during your sport event.

General description of the initiative
40 million practitioners, 16 million licenses and 2.6 million sporting events organized every year. The digits are impressive, and those are for France only. A demonstration of 5000 people alone generates up to 2.5 tons of waste, consumes on average 1000 kWh of energy and 5000 kg of paper! Each sporting event is therefore causing great pressure on the environment and our natural resources.

Zero Waste France designed this booklet as a triggering tool to raise awareness and the beginning of a journey towards an overall positive approach.

Results
The Amnecy marathon, accompanied by the local Zero Wastes Amnecy group, undertook in 2018 a global zero waste approach: generalization of sorting, recovery of all organic waste on all concerned supplies (200 kg saved from incineration), recovery clothes by the structure Bazar sons Frontières and sponges by partner schools, reduction of packaging for meals and T-shirts, use of ecopots throughout the village, etc.

The City of Herbiers (France) deploys for 5 years a waste program reduction targeting its various sports clubs: recycling sector cardboard from a local school, reusable cups in stadiums and bins replaced as much as possible with awareness-raising posters about waste reduction.
